

Description

Advanced Twin SIM Adaptor from Mobile Fun, is a revolutionary twin SIM adaptor that lets you swap between 2 different SIM* cards through your phone's own menu!

Enjoy the freedom of two mobile numbers in one handset! Now you can take advantage of different networks offers allowing you the freedom of both contract & pay as you go deals with only one handset. This product is a must for any user who has two numbers. Separate your work and personal calls, with support for separate sets of contacts on each SIM* card or share your phone book between both

How it works:

Modern phones support SAT (SIM Application Toolkit), which allows users access to SIM* card functions. The Advanced Twin SIM Adapter uses the option on your phone to create a new menu which allows you to choose which SIM* card you'd like to use. Once you've made your choice, it swaps between them automatically.

How to use:

Method 1:

- Use the Twin SIM cutting tool (available here) accurately trim each SIM card to the correct size
- Slide each trimmed SIM card into the spaces on the Advanced Twin SIM adaptor and slide on the metal cover.
- Slot into your phones's SIM card holder and use.

Method 2:

- Apply the template stick to the back of each SIM card.
- Cut around the lined markings on the template, making sure to follow them precisely.
- Slide each trimmed SIM card into the spaces on the Advanced Twin SIM adaptor and slide on the metal cover.
- Slot into your phones's SIM card holder and use.

Each pack also includes 2 replacement SIM adapters, allowing you to use your SIM card to fit into phones normally.

* Not for use with 3G (USIM) cards.

Inserting the Advanced Twin SIM Adaptor can be tricky on some phones. Phones with plastic SIM gates should have the gate removed before insertion or removal. Some phones may require a tool to extract the Advanced Twin SIM Adaptor from the phone.

NOTE: Mobile Fun will not be held responsible for any damage caused due to the cutting of SIM cards or damage caused to handsets from insertion or extraction of the device. Contact your network provider if a new SIM card is required. Handsets must have no network restrictions (unlocked) in order to operate with all UK 2G/GSM SIM cards.

SIM MAX 12 in 1 SIM Card are MultiSIM Reader/Writer with advanced system STK which can combine 12 most frequently used mobile numbers (SIMCards) from different areas, countries or different networks numbers in just one SIM card. A smart design of this MultiSIM can now solve problems for people who own several mobile numbers and always wonder which one to bring when they go out. With this MultiSIM card, you can combine all your mobile numbers in this MultiSIM card. The operating process is very easy, with the software and the manual provided, you will be able to operate it and switch it to the number or network that you wish. This way, the problem of changing sim cards and paying large amount of phone bill will both be avoided. You are further able to download and edit your SIM card's phone book and SMS messages, change the PIN code of your card and do other useful functions. The SIM DOCTOR package contains one MultiSIM which can store up to 10 numbers (from the same or different networks) as well as the serial port SIM card read/writer and software. Only in our company you will find USB version which is 1,5x faster and 2x smaller that other types of such devices !
